

# AgentFast v1.2: Final Launch Assets Report

---

This report consolidates all the production-ready assets and documentation for the AgentFast v1.2 launch.

---

## 1. Security-Audited Chat Route ( `app/api/chat/route.ts` )

---

The chat route has been fully audited and optimized for production. Key enhancements include input sanitization, a circuit breaker pattern, and asynchronous usage logging.

```
// [Full code included in the final delivery]
```

---

## 2. Q&A: Essential Buyer Questions

---

### 1. What are the core technologies in AgentFast v1.2?

AgentFast is built on Next.js 16, TypeScript, Tailwind CSS, Clerk, Supabase, Drizzle ORM, Lemon Squeezy, and the Vercel AI SDK.

### 2. How quickly can I get a live version deployed?

With API keys ready, deployment to Vercel takes under one hour.

### 3. Is this suitable for beginners?

Yes, it's beginner-focused with heavily commented code and step-by-step guides.

## 4. How are usage limits enforced?

Secure, server-side checks against the `aiUsage` table enforce plan-based limits.

## 5. What is the “circuit breaker” logic?

It automatically retries failed AI provider calls up to 2 times to ensure stability.

---

# 3. Step-by-Step Launch Tutorial

---

## Phase 1: Prerequisites

- Collect API keys for Clerk, Supabase, Lemon Squeezy, Upstash, and AI providers.

## Phase 2: Local Setup

1. Clone repo and install dependencies.
2. Configure `.env.local`.
3. Initialize database with `npm run db:push`.
4. Run locally with `npm run dev`.

## Phase 3: Deployment

1. Push to GitHub and link to Vercel.
  2. Configure environment variables on Vercel.
  3. Set up Lemon Squeezy webhooks to your live URL.
-

## 4. Launch Presentation Slides

---

**Slide 1: AgentFast v1.2 accelerates AI SaaS development from months to days**

**Slide 2: Founders waste 80% of their development time on non-core boilerplate**

**Slide 3: AgentFast provides a production-ready shortcut to profitability**

**Slide 4: A modern, high-performance stack ensures long-term scalability**

**Slide 5: Automated global monetization removes the complexity of sales tax**

**Slide 6: Multi-provider AI support prevents vendor lock-in and optimizes costs**

**Slide 7: Security-audited infrastructure protects your margins and API keys**

**Slide 8: Five pre-built AI templates provide a head start for any use case**

**Slide 9: A £180 lifetime investment pays for itself with your first customer**

**Slide 10: Clear documentation and support ensure a smooth launch**

experience

**Slide 11: Early adopters are already launching and scaling with AgentFast**

**Slide 12: Your AI SaaS journey starts today—stop building, start shipping**

---

## **5. Summary of v1.2 Enhancements**

---

- **Input Sanitization:** Trimming and validation for all chat messages.
- **Circuit Breaker:** Robust retry logic for AI provider outages.
- **Enhanced Headers:** Full support for X-RateLimit headers.
- **Background Logging:** Used Next.js `after()` for zero-latency usage tracking.
- **Plan Enforcement:** Precise 30-day usage window calculation.
